

Sustainability at industrial scale.

Sustainability is engineered into every product we make for The Home Depot — and our vertically integrated resin production is one part of that larger system.

01 Our own recycled resin · Materials

360M lbs

of certified recycled resin every year.

Enough to fill Mercedes-Benz Stadium 4+ times with water bottles — and engineered to match virgin performance.

RESIN PER YEAR

More than doubled since 2025.

DO THE MATH · IN OUR AISLES

What one tote adds up to.

4.5 lbs

of recycled resin per 27-gal tote

× 30M

totes sold every year

= 135M lbs/yr

of recycled resin behind one aisle staple

100% All of our products are 100% recyclable.

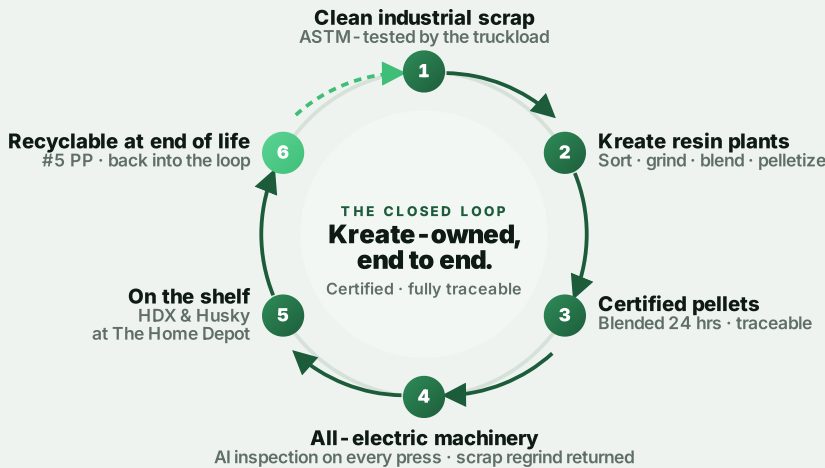

1/10

The power. All-electric machinery vs. the hydraulic machines it replaces.

48%

Less label material per unit — about 88 acres a year across 60M labels.

02 How we make it · Manufacturing

Old machines out, electric in

We modernize acquired plants — legacy hydraulic machines retired for all-electric machinery. Less power, no hydraulic oil.

AI inspection → regrind

AI-driven quality inspection at every press reduces scrap — and all scrap is ground on site and reintroduced into our parts.

Closed-loop water

Chiller systems treat and recirculate process water — it stays in our system.

03 What's in the product · Recycled base, engineered to spec

HDX Tough Totes

Recycled-plastic bases, from the 0.75-qt Nano to 127-gal.

BASE RECYCLED

HDX Tote Stacker

Stacks four totes on wheels, with slide-out access — 7G to 27G.

DURABLE BY DESIGN

Husky Pro Grip Totes

Heavy-duty recycled bases — up to the 170-gal MegaTote.

BASE RECYCLED

HDX Shelving

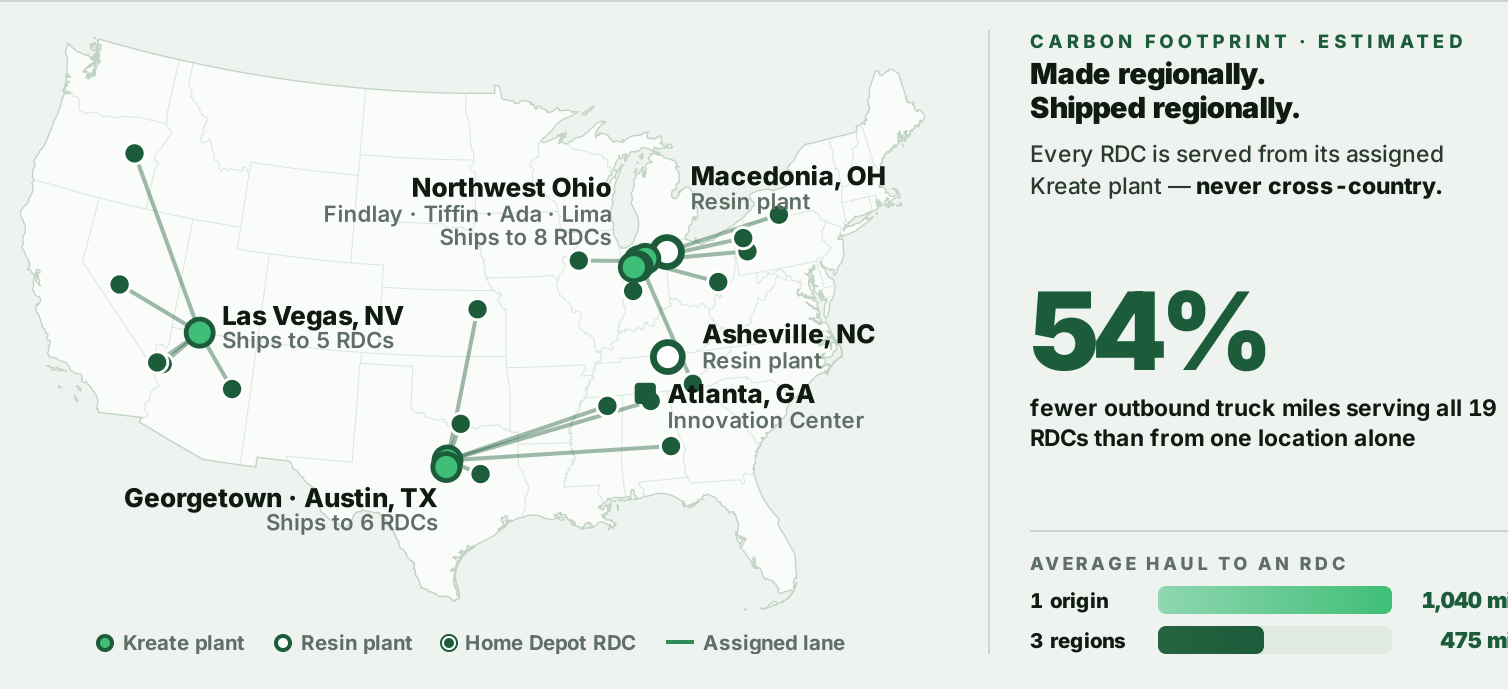

Recycled resin shelving — holds up to 1,000 lbs, built to last.

BUILT TO LAST

Made in America, from waste to shelf.

Recycled resin made in Kreate - owned U.S. plants, shipped regionally, molded into products built to last — full - circle sustainability.

04 Where we make it · Logistics

Inverted, nested loads

Totes ship inverted & nested — more units on every truck, fewer trucks on the road

WHAT WE SAVE EVERY YEAR	TRUCKLOADS	TRUCK MILES	DIESEL	CO ₂	FREIGHT SPEND
2026 · one size (27-gal)	~1,070	~510K mi	~78K gal	~1.8M lbs	~\$1.6M
2027 · six sizes + clear totes	~1,340	~640K mi	~98K gal	~2.2M lbs	~\$2.0M

05 The full circle · Advancing our Eco Actions

Less virgin plastic

Every pound of recycled resin we produce is one less pound of virgin plastic in the supply chain.

Diverted from landfills

Millions of pounds of plastic become durable products — with end-of-life recovery piloting now.

Made in America

American recycled materials — strengthening domestic manufacturing and a circular economy.

Engineered in, at scale

Sustainability isn't a side project — it's engineered into every product we make.

SUSTAINABILITY BY THE NUMBERS

2026

360M lbs/yr Virgin plastic displaced Up from 150M lbs in 2025	88 acres/yr Label material eliminated Across 60M labels a year	~14.7M mi/yr Truck miles avoided From regional shipping alone	~51.5M lbs/yr CO₂ avoided in transport Regional shipping · ~2.3M gal
--	---	--	--

Full circle. Certified resin. Made in America. Kreate + The Home Depot

Freight:

26,000 loads/yr · 19 RDCs · THD origin assignments vs. one Ohio origin · 6.5 mpg · 3.5 lbs CO₂/mi.

Inversion:

pallet - config math · 475 - mi avg haul · \$1,500/TL, a conservative approximation.
